Instant traffic was one of the reasons I wanted an XM Satellite radio. I use it each day for the 50 mile drive I make to and from work in Dallas. It has saved me time, gas and frustration by allowing me to take an alternate route to work when my primary route is congested. The only time I learn of a problem on AM or FM radio is while I'm stuck in the backup that was reported much too late. INSTANT traffic is what I need each work day. Not the hit or miss reports on AM or FM.  
Thanks you for your attention.
